## Background to the workforce equality analysis

- For listed public authorities with 150 or more employees the Equality Act 2010 introduced a specific requirement to publish information relating to the protected characteristics of the authority's employees.
- Technical guidance issued by the Equality and Human Rights Commission states that the types of information that could be published include:
  - the profile of staff at different grades, levels and rates of pay, including any patterns of occupational segregation and part-time work;
  - the profile of staff at different stages of the employment relationship, including recruitment, training, promotion, and leavers, and the numbers of complaints of discrimination and other prohibited conduct;
  - details of, and feedback from, any engagement exercises with staff or trade unions;
  - o any records of how it has had due regard in making workforce decisions, including any assessments of impact undertaken and the evidence used.
- The present report aims to fulfil Leicestershire Partnership NHS Trust's duty to publish
  information relating to the protected characteristics of its employees, whilst ensuring
  that the Trust also has "due regard" to the aims of the Equality Act with respect to its
  workforce by using this equality monitoring information in decision-making and
  planning.

# A note on the anonymisation of information about employees within this report

This version of the report has been redacted and edited to allow publication on a publically accessible website. The report contains counts of numbers of employees, analysed in several tables, by their protected characteristics (e.g., age group, gender) and a domain of interest relating to their employment (e.g., staff group). The use of these tables to produce aggregated summaries of employee counts has the effect of anonymising much of the information and protecting the identities of individual employees. However, some analyses contain very small counts of employees in some groups, especially when broken down by certain domains of interest. Such small counts could, potentially, be used to identify individual employees, even after aggregation. Consequently, these small counts might be considered personal information that is protected by the Data Protection Act 1998 and other legislation. Where there is a risk that individuals could be identified from a small count, these counts have been redacted from the tables. Where the redacted count can be deduced from other counts in a table, these other counts have been redacted as well. If a risk that individuals could be identified remains after redaction, or the table is rendered uninformative by the redaction of the counts within it, then the entire table is redacted. In the present report, as a start point for the anonymisation process, counts below 10 have been redacted to mitigate the risk that individuals might be identifiable. The anonymisation process has followed guidance issued by the Information Commissioner's Office<sup>1</sup>.

<sup>&</sup>lt;sup>1</sup> Information Commissioner's Office: Anonymisation: managing data protection risk code of practice (November 2012)

#### **Workforce context**

- Leicestershire Partnership NHS Trust (LPT) provides mental health, learning disability, and community health services to the population of Leicester, Leicestershire, and Rutland (mid-year population estimate at June 2015: 1,055,982).
- At the end of March 2017, LPT had a substantive workforce of 5484 employees (headcount including non-executive directors). Of these employees, 1267 also held bank posts (23.1%). A further 1006 staff were employed solely on the bank, without substantive posts.
- LPT is organised into five directorates:

Table 1: Leicestershire Partnership NHS Trust's substantive workforce by directorate

Directorate	n	%
	(headcount)	
Adult Mental Health and Learning Disability Services (AMH&LD)	1317	24.0%
Community Health Services (CHS)	2094	38.2%
Families, Young People and Children's Services (FYPC)	1323	24.1%
Enabling (corporate functions)	542	9.9%
Hosted services (health informatics, audit, and assurance)	208	3.8%
LPT overall	5484	

LPT's workforce encompasses a variety of job roles:

# **Equality analysis of Leicestershire Partnership NHS Trust's workforce at March 2017**

- A quantitative equality analysis of LPT's workforce was undertaken, based on
  - a snapshot of the workforce at the end of March 2017 (5484substantive employees, with a further 1006 staff on the bank without a substantive post),
  - recruitment, training, promotions, achievement of incremental pay awards, and workforce leavers (including reasons for leaving) for the year to the end of March 2017,
  - and employee relations cases in a two year window covering the 2015/16 and 2016/17 financial years.

<sup>\*</sup> includes Healthcare Scientists

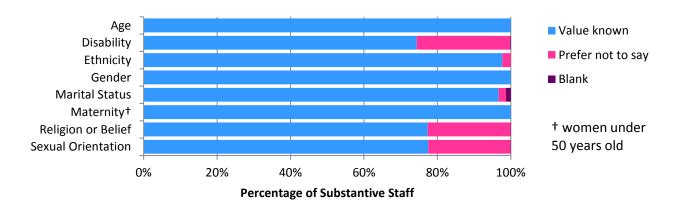

<sup>\*\*</sup> includes Estates and Ancillary

R - Redacted

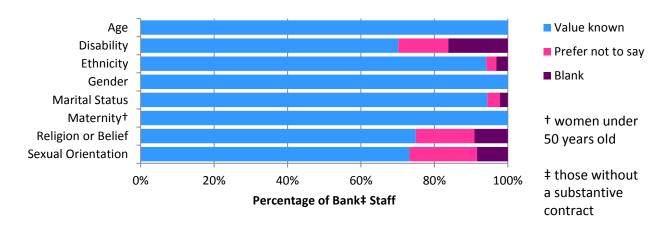

### **Main findings**

## 1. Equality monitoring information was incomplete on Disability, Religion or Belief, and Sexual Orientation

Disability status, Religion or Belief, and Sexual Orientation were each not known for between approximately one fifth and one quarter of the 5484 substantive staff,

and for between approximately one quarter and one third of staff solely on bank contracts (those with no substantive post at LPT).

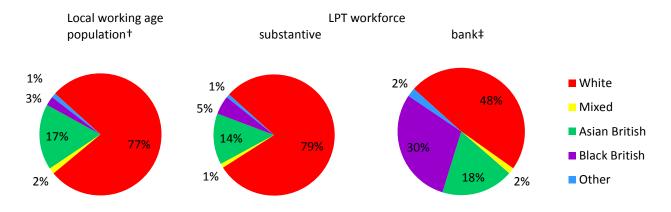

Amongst substantive staff, this reflected staff who chose "prefer not to say" against the given protected characteristic, whilst amongst bank staff many chose "prefer not to say," but there were also similar numbers of blank records (with no value selected).

Complete information on Disability will be especially important given NHS England's plans to mandate a Workforce Disability Equality Standard in the NHS Standard Contract from April 2018, with a preparatory year during 2017/18.

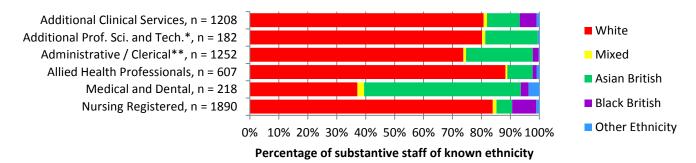

## 2. Asian British people were underrepresented in the substantive workforce, especially in nursing

Asian British people were underrepresented amongst substantive staff, whilst Black British people were overrepresented amongst substantive staff and amongst bank staff.

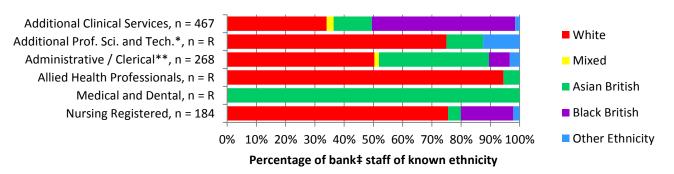

Total N = 663849 Total of known ethnicity = 5357 Total of known ethnicity = 947 † Population of Leicester, Leicestershire, and Rutland aged 16 to 64 years old, 2011 UK Census

This pattern reflected occupational segregation within the workforce. Asian British people had particularly low levels of representation in the Nursing profession, both amongst substantive staff, and amongst bank staff.

Meanwhile, Black British people were concentrated in Additional Clinical Services roles and in the Nursing profession, both amongst substantive staff and amongst bank staff.

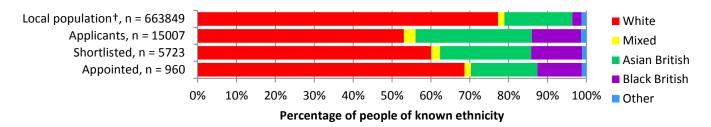

<sup>\*</sup> includes Healthcare Scientists; \*\* includes Estates and Ancillary; ‡ those without a substantive contract; n = total of known ethnicity; R - Redacted

<sup>‡</sup> those without a substantive contract

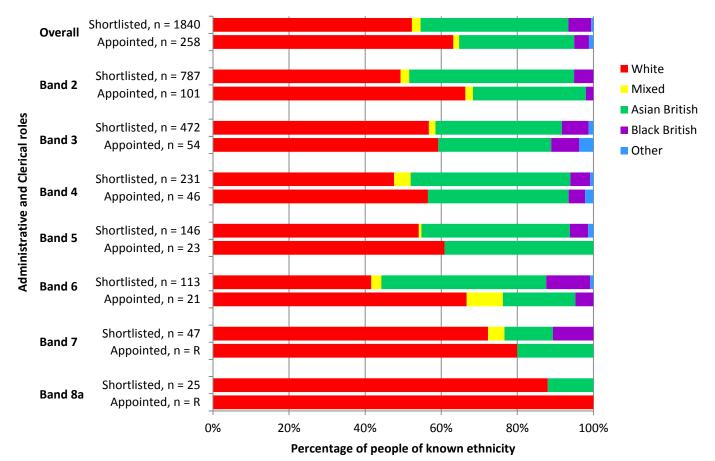

#### 3. BME job applicants were less likely to be appointed from shortlisting

BME people were overrepresented amongst job applicants (compared to the local working age population), but were less likely to be shortlisted from amongst applicants, and were less likely to be appointed from amongst those shortlisted; reflecting primarily the recruitment profile of Asian British people.

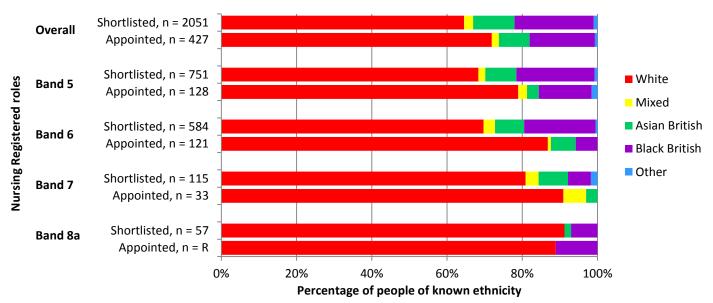

<sup>†</sup> Population of Leicester, Leicestershire, and Rutland aged 16 to 64 years old, 2011 UK Census

More detailed analyses indicated that, for Administrative and Clerical roles, BME people (especially Asian British people) were less likely to be appointed from amongst those shortlisted at Bands 2 and 6;

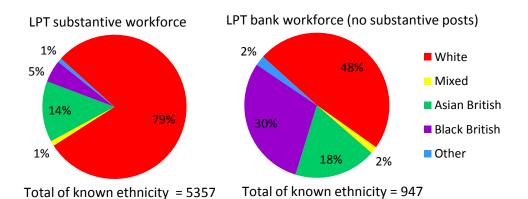

R - Redacted

whilst in Nursing roles, BME people were less likely to be appointed from amongst those shortlisted at Bands 5 and 6, with Black British people less likely to be appointed from amongst those shortlisted at Band 6, specifically.

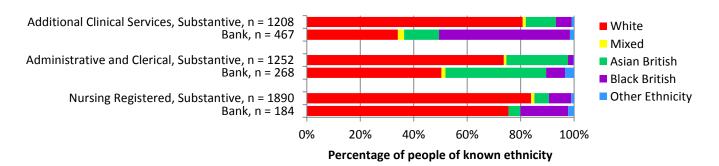

#### 4. BME people were overrepresented in the bank workforce

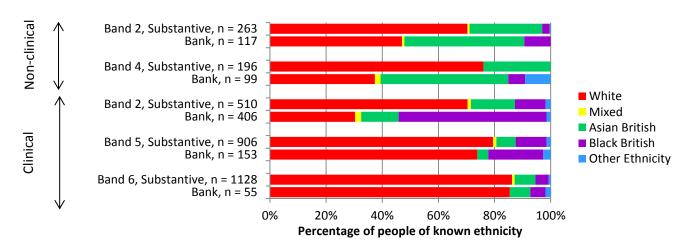

BME people (especially Black British people and, to a lesser extent, Asian British people) were overrepresented in the Bank workforce (those solely on bank contracts, without a substantive post at LPT) compared to their levels of representation in the substantive workforce.

This finding was not accounted for by differences in the occupational group and pay band profiles of Substantive and Bank staff. Within Additional Clinical Services and Nursing roles, Black British staff were overrepresented on the Bank, whilst within Administrative and Clerical roles, BME staff in general were overrepresented on the Bank.

In non-clinical roles at Band 4, Asian British people were overrepresented on the Bank; whilst in clinical roles at Bands 2 and 5 (but not Band 6), Black British people were overrepresented on the Bank.

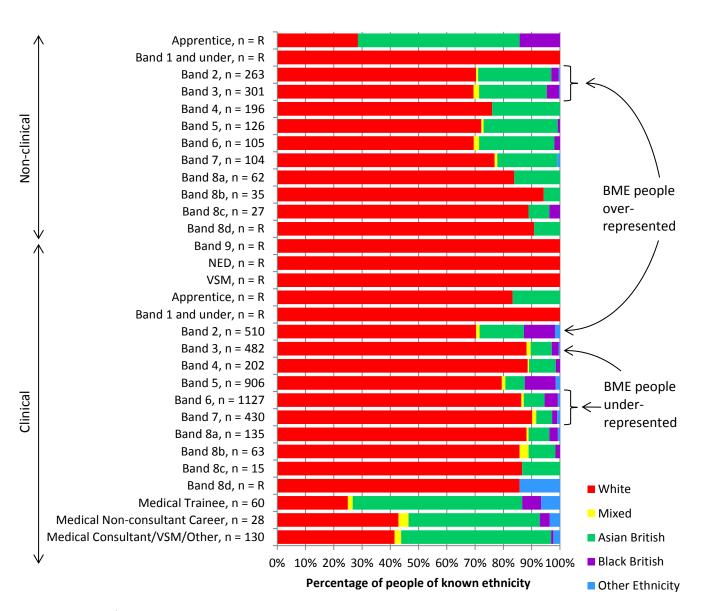

#### 5. BME people were overrepresented at lower pay bands

In substantive posts, BME staff were overrepresented at lower pay bands in both nonclinical and clinical roles. There were different underlying trends for Asian British people and Black British people.

There was a trend for Asian British staff to be underrepresented at higher levels in non-clinical roles (Band 7 and above).

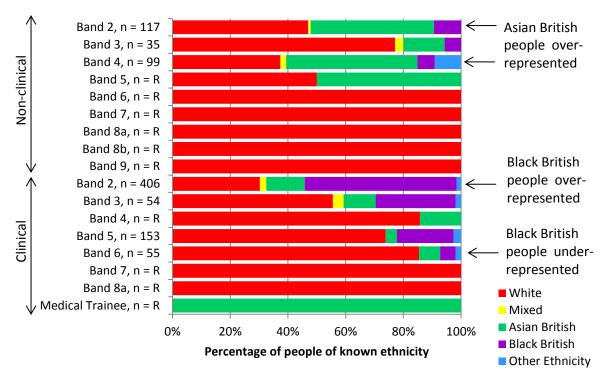

There was a trend for Black British staff to be underrepresented at higher levels in unqualified clinical roles (Bands 3 and 4) and at higher levels in qualified clinical roles (Bands 6 and above).

n = total of known ethnicity; R - Redacted

Further pay band analyses, compartmentalised by age band, indicated that the underrepresentation of BME staff at higher pay bands could not be explained by a younger age profile for BME staff.

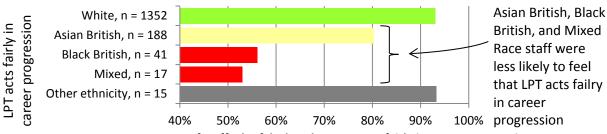

In Bank posts, Black British people were overrepresented at Clinical Band 2, and were underrepresented at Clinical Band 6.

n = total of known ethnicity; R - Redacted

## 6. BME staff were less likely to feel that LPT acts fairly in respect of career progression

BME staff (Asian British, Black British, and Mixed Race) were less likely to feel that LPT acts fairly in respect of career progression (2016 NHS Staff Survey).

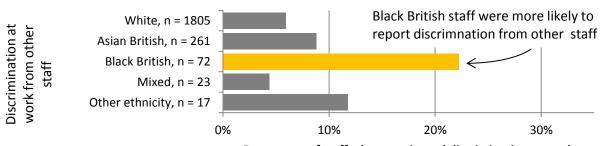

Percentage of staff who felt that the Trust acts fairly in career progression

This represents a similar pattern to that observed in 2015 when Asian British and Black British staff were less likely to feel that LPT acts fairly in respect of career progression (2015 NHS Staff Survey).

Overall, the percentages of staff who felt that LPT acts fairly in respect of career progression were similar in 2016 and 2015 (89.3% vs 89.6%).

#### 7. Black British staff were more likely to report discrimination from other staff

Black British staff were more likely to report discrimination from other staff (2016 NHS Staff Survey).

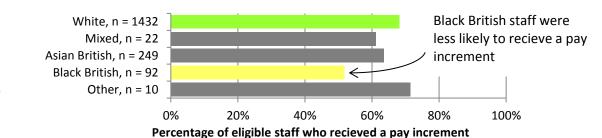

Percentage of staff who experienced discrimination at work

This represents a similar pattern to that observed in 2015 when BME staff (Asian British and Black British) were more likely to report discrimination from other staff (2015 NHS Staff Survey).

Overall, levels of discrimination from other staff were similar in 2016 and 2015 (7.0% vs 6.8%).

#### 8. Black British staff were less likely to receive a pay increment

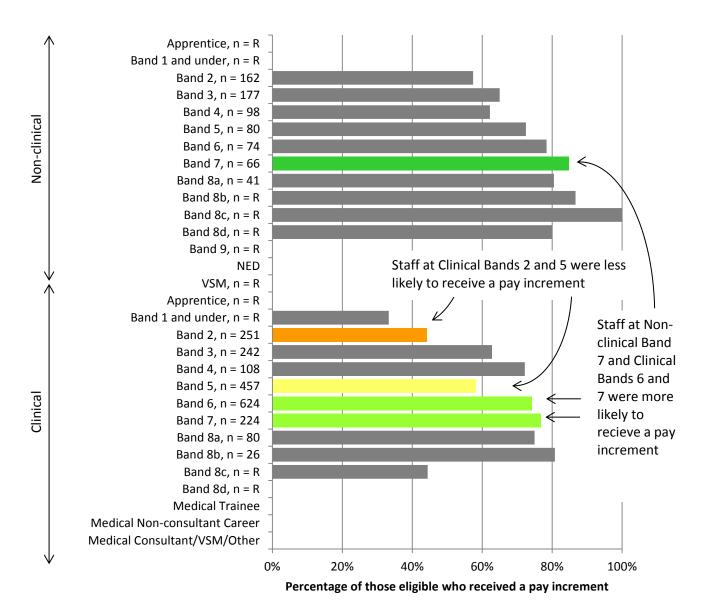

Black British staff were less likely to receive a pay increment;

n = total of known ethnicity

Pay increments

associated with the finding that staff at Clinical Bands 2 and 5 were less likely to receive a pay increment (Black British people were overrepresented at these pay bands).

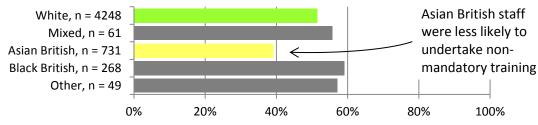

n = total; R - Redacted

#### 9. Asian British staff were less likely to undertake non-mandatory training

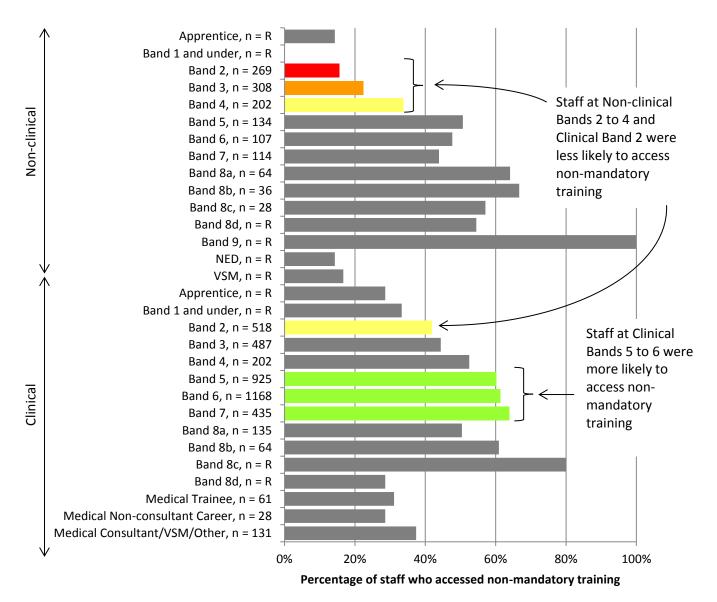

Asian British staff were less likely to undertake non-mandatory training;

Percentage of staff who accessed non-mandatory training

associated with the finding that staff at non-clinical Bands 2 to 4 and at clinical Band 2 were less likely to access non-mandatory training (Asian British people were overrepresented at these pay bands).

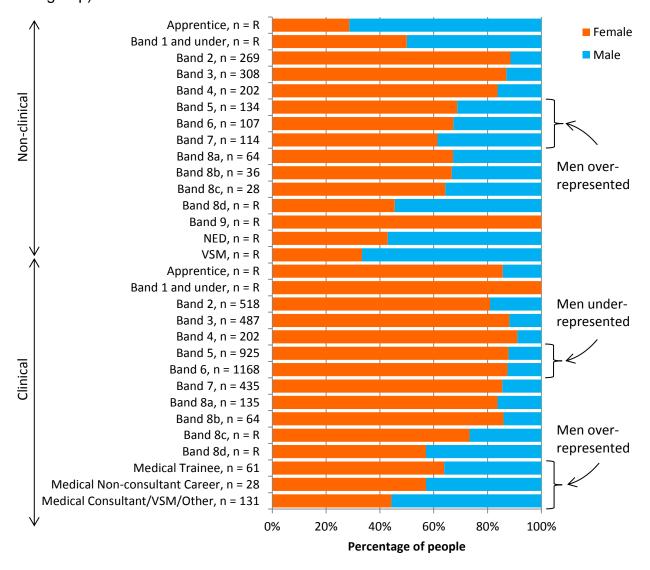

n = total; R - Redacted

#### 10. Men were overrepresented at middle to higher levels in non-clinical roles

In substantive posts, men were overrepresented at middle to higher levels in nonclinical roles (non-clinical Bands 5 to 7), reflecting an overall trend for lower proportions of women at higher levels in non-clinical roles.

In clinical roles, men were underrepresented at Bands 5 and 6 and overrepresented in the Medical pay bands, reflecting occupational segregation (an underrepresentation of men in Nursing roles and their overrepresentation in the Medical and Dental staff group).

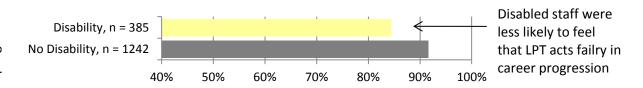

n = total; R - Redacted

The Government has introduced mandatory gender pay gap reporting for private, voluntary, and public sector organisations from the 2016/17 financial year. Leicestershire Partnership NHS Trust will be required to publish a gender pay gap analysis before the end of the 2016/17 financial year. The analyses of gender and pay band detailed above indicate that Leicestershire Partnership NHS Trust's gender pay gap analyses will reveal a pay gap in favour of men. Gender pay gap reporting will be the subject of a separate report to follow.

## 11. Disabled staff were less likely to feel that LPT acts fairly in respect of career progression

Disabled staff were less likely to feel that LPT acts fairly in respect of career progression (2016 NHS Staff Survey).

LPT acts fairly in career progression

Percentage of staff who felt that the Trust acts fairly in career progression

This represents a similar pattern to that observed in 2015 when Disabled staff were less likely to feel that LPT acts fairly in respect of career progression (2015 NHS Staff Survey).

Overall, the percentages of staff who felt that LPT acts fairly in respect of career progression were similar in 2016 and 2015 (89.3% vs 89.6%).

#### 12. Disabled staff were more likely to report discrimination from other staff

Disabled staff were more likely to report discrimination from other staff (2016 NHS Staff Survey).

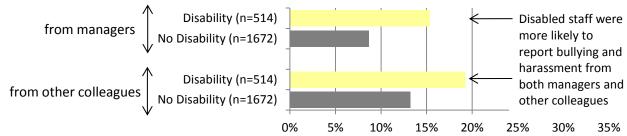

This represents a similar pattern to that observed in 2015 when Disabled staff were more likely to report discrimination from other staff (2015 NHS Staff Survey).

Overall, levels of discrimination from other staff were similar in 2016 and 2015 (7.0% vs 6.8%).

#### 13. Disabled staff were more likely to report staff-on-staff bullying and harassment

Disabled staff were more likely to report staff-on-staff bullying and harassment, both from managers and from other colleagues (2016 NHS Staff Survey).

Percentage who experienced harassment, bullying or abuse at work

This represents a similar pattern to that observed in 2015 when Disabled staff were more likely to report staff-on-staff bullying and harassment (2015 NHS Staff Survey).

Overall, levels of harassment, bullying or abuse from other staff reported in the NHS Staff Survey were lower in 2016 than in 2015, both from managers (10.5% vs 11.4%) and from other colleagues (14.9% vs 15.4%).

## Summary of equality issues, context, and actions

The main equality issues arising from the equality analysis of the workforce are outlined below, alongside their contexts, and actions undertaken, actions in progress, and actions planned. Further details on the findings of the equality analyses are given in the Appendix of equality analysis tables which starts on page 23 and the Appendix of data quality analysis tables which starts on page 86.

Findi	ing	Equality issue	Context	Action, progress, and plans	Time- scale
Gaps in equality monitoring information	1	Equality monitoring information was incomplete on Disability, Religion or Belief, and Sexual Orientation	Equality monitoring information was incomplete for up to a third of staff – depending on protected characteristic and whether bank or substantive.	The EHR team make an annual request to staff to update and complete their demographic information held on ESR. The request is publicised through the staff newsletter, video logs, and Listening into Action events.  Little progress has been made on improving the completeness of information on Disability, Religion or Belief, and Sexual Orientation. Most staff with incomplete information have chosen the "prefer not to say" option. Notably, respondents to the 2016 NHS Staff Survey gave equality information that was far more complete than that held on the Electronic Staff Record for disability, religion or belief, and sexual orientation. Consequently, the principal barrier to gaining complete equality monitoring information on the workforce might lie in the fact of declaring the information directly to an employer.  There is a risk that this issue will hamper reporting against the Workforce Disability Equality Standard due to be implemented by NHS England from April 2018.	March 2018
Ethnicity in the workforce	2	Asian British people were underrepresented in the substantive workforce, especially in nursing	Asian British people comprised 17% of the local population, but made up just 14% of LPT's workforce - with especially low levels of representation in nursing (5%).  Asian British communities may represent a relatively untapped source of nursing talent.	Recruitment events for nursing posts, and events to promote the nursing profession in general, should ensure promotion to Asian British communities, using culturally appropriate materials and media.  This work will be pursued through Learning and Development to promote the nursing profession to schools and colleges, and through the Recruitment Team to promote the nursing profession at career fairs.	March 2018

Findi	ng	Equality issue	Context	Action, progress, and plans	Time- scale
Ethnicity and recruitment	3	BME job applicants were less likely to be appointed from shortlisting	For Administrative and Clerical roles, BME people (especially Asian British people) were less likely to be appointed from amongst those shortlisted at Band 2 (8.5% BME vs 17.3% White appointed) and Band 6 (10.6% BME vs 29.8% White appointed).  In Nursing roles, BME people were less likely to be appointed from amongst those shortlisted at Band 5 (11.3% BME vs 19.7% White appointed) and at Band 6 (9.0% BME vs 25.8% White appointed). Black British people were markedly less likely to be appointed from amongst those shortlisted at Band 6 (6.3% Black British vs 25.8% White appointed).	Encourage and promote applications from BME people to posts at higher pay bands. A particular area to target would be the promotion of qualified nursing roles to Asian British people. Offer support in making strong applications.  Ensure recruitment panels are representative.  Unconscious bias training for recruitment panels and managers.  Undertake an in-depth audit of recruitment – especially Band 2 and 6 Administrative and Clerical posts and Band 5 and 6 Nursing posts. This may involve looking at scoring, notes, and decision-making for appointments.	March 2018
Ethnicity and bank workers	4	BME people were overrepresented in the bank workforce	BME people comprised 21% of the substantive workforce and 52% of those on bank contracts without a substantive post.  The overrepresentation of BME people on the bank was especially marked for Asian British people in Administrative and Clerical roles (37.7% bank vs 23.1% substantive) and for Black British people in Additional Clinical Services (49.0% bank vs 5.9% substantive) and Nursing roles (17.9% bank vs 8.4% substantive).The association remains apparent even when taking into account that Bank posts tend to be at lower pay bands.	Those solely employed through bank work will be relying on a "zero-hours" contract for their living.  Whilst zero-hours contracts offer flexibility in employment, they offer no guarantee of work. Additionally, at LPT, unlike substantive staff, bank workers are not automatically eligible to be considered for an annual pay increment.  Consideration might be given to offering substantive contracts where possible and, ultimately, to running a surplus substantive workforce rather than running a parallel bank workforce.	March 2018

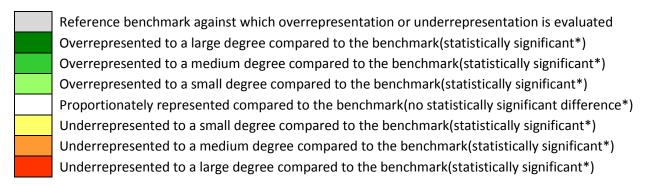

Finding		Equality issue	Context	Action, progress, and plans	Time- scale
		BME Staff were overrepresented at lower pay bands	There was a trend for Asian British staff to be underrepresented at higher levels in non-clinical roles (Band 7 and above), in substantive posts (e.g., 25.9% at Band 2 down to 16.1% at Band 8a).	The following actions may help the Trust to start addressing the underrepresentation of BME staff at the higher pay bands, in turn tackling the discrimination and unfairness in career progression reported by BME staff in the staff survey:	
Ethnicity and career progression	5		There was a trend for Black British staff to be underrepresented at higher levels in unqualified clinical roles (11.0% at Band 2 vs 2.5% and 1.5% at Bands 3 and 4) and at	- Positive action initiatives internally and externally that raise awareness of the recruitment and selection process;	March 2018
			higher levels in qualified clinical roles (11.0% at band 5 vs 4.7% and 1.9% at Bands 6 and 7) in substantive posts. There was also a similar pattern amongst those in Bank posts.	- Mentoring, coaching and development programmes (e.g., outline career progress journey) targeted at Non Clinical Bands 2 and 3, and Clinical Band 2 and Band 5, to support progression to higher pay bands, with an emphasis on promoting the participation of BME staff;	
	6	BME staff were less likely to feel that LPT acts fairly in respect of career progression	BME staff were less likely to feel that LPT acts fairly in respect of career progression (75.5% BME vs 93.1% White, 2016 NHS Staff Survey).	<ul> <li>BME taskforce and Staff Support Groups championed at Board level, with adequate support and resources;</li> <li>Raise awareness at national level of the need to develop initiatives that encourage people into nursing roles, ensuring an approach that</li> </ul>	March
inicity and o	7	Black British staff were more likely to report discrimination from other staff	Black British staff were more likely to report discrimination from other staff (22.2% Black British vs 5.9% White, 2016 NHS Staff Survey).	will engage Asian British people;  - Provide support to assist unqualified clinical staff on low pay bands to gain the qualifications necessary for qualified clinical roles.	2018
盐	8	Black British staff were less likely to receive a pay increment	Black British staff were less likely to receive a pay increment (51.7% Black British vs 68.2% White); associated with the finding that staff at Clinical Bands 2 and 5 were less likely to receive a pay increment (Black British people were overrepresented at these pay bands).	Audit and investigate reasons why increments have not been awarded – particularly at Clinical Bands 2 and 5.  Routinely record on U-Learn the reason that an increment has not been awarded.	March 2018
	9	Asian British staff were less likely to undertake non- mandatory training	Asian British staff were less likely to undertake non-mandatory training (39.1% Asian British vs 51.5% White); associated with the finding that staff at non-clinical Bands 2 to 4 and at clinical Band 2 were less likely to access non-mandatory training (Asian British people were overrepresented at these pay bands).	Review the provision of non-mandatory training to those in Administrative and Clerical roles and assess its efficacy in supporting career development.  The non-mandatory training included in this indicator covers only that	March 2018

				logged on U-learn (the central electronic training record). Unfortunately, some training delivered locally or sourced externally is not recorded centrally and will not be reflected in this indicator; this issue will have affected Medical staff more than other groups. BME people are overrepresented amongst Medical staff; consequently the present figure may underestimate the likelihood of BME staff accessing non-mandatory training. Work is planned to log all training on U-learn.	
Find	ing	Equality issue	Context	Action, progress, and plans	Time- scale
Gender and pay	10	Men were overrepresented at middle to higher levels in non-clinical roles	In substantive posts, men were overrepresented at middle to higher levels in non-clinical roles (non-clinical Bands 5 to 7), reflecting an overall trend for lower proportions of women at higher levels in non-clinical roles (over 80% women at Bands 2 to 4, down to below 70% women at bands 5 to 8d and 33% at VSM).	The Government has introduced mandatory gender pay gap reporting for private, voluntary and public sector organisations from the 2016/17 financial year. Leicestershire Partnership NHS Trust will be required to publish a gender pay gap analysis before the end of the 2016/17 financial year.  These analyses indicate that Leicestershire Partnership NHS Trust will exhibit a pay gap in favour of men. Gender pay gap reporting will be the subject of a separate report to follow.  The following actions may help the Trust to start addressing the underrepresentation of women at higher, non-clinical pay bands:  - Staff Support Group for Women.  - Positive action initiatives internally and externally that raise awareness of the recruitment and selection process.  - Mentoring, coaching and development programmes (e.g., outline career progress journey) targeted at Non Clinical Bands 2 and 3, and Clinical Band 2 and Band 5, to support progression to higher pay bands, with an emphasis on promoting the participation of women.	March 2018

Find	ing	Equality issue	Context	Action, progress, and plans	Time- scale
	11	Disabled staff were less likely to feel that LPT acts fairly in respect of career progression	Disabled staff were less likely to feel that LPT acts fairly in respect of career progression (84.4% Disabled vs 91.6% Not disabled, 2016 NHS Staff Survey).	Disabled Staff Support Group championed at Board level, with adequate support and resources.  Disabled Staff Support Group to lead on supporting LPT to address issues that affect disabled staff.	
Disabled staff	12	Disabled staff were more likely to report discrimination from other staff	Disabled staff were more likely to report discrimination from other staff (12.4% Disabled vs 5.4% Not disabled, 2016 NHS Staff Survey).	The Trust continues to raise awareness of its anti-bullying and harassment policies and processes to ensure that staff are aware of how to deal with inappropriate behaviour and how to report incidents. The Trust operates an Ant-Bullying and Harassment Advice Service for staff. This work needs to be focussed on the needs of	March 2018
Δ	13	Disabled staff were more likely to report staff-on-staff bullying and harassment	Disabled staff were more likely to report staff-on-staff bullying and harassment, both from managers (15.4% Disabled vs 8.7% Not disabled, 2016 NHS Staff Survey) and from other colleagues (19.2% Disabled vs 13.2% Not Disabled, 2016 NHS Staff Survey).	Disabled staff.	

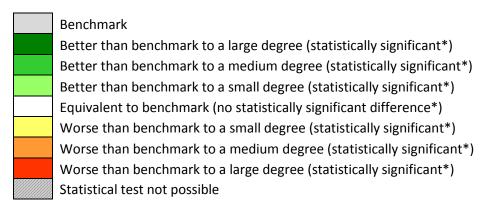

## Appendix of equality analysis tables

# Key to interpreting the tables of analysis based on counts of people in different areas and groups within the workforce

<sup>\*</sup> based on a Chi-Squared or Fisher's Exact Test followed by *post-hoc* analysis of standardised residuals (α = .05, Bonferroni correction applied); the degrees of underrepresentation or overrepresentation (small, medium, large) follow the standards for effect sizes applied in the social sciences

### Key to interpreting the tables of analysis based the 2016 NHS Staff Survey

<sup>\*</sup> based on odds ratios (Bonferroni correction applied); the degrees of underrepresentation or overrepresentation (small, medium, large) follow the standards for effect sizes applied in the social sciences

Please note: for some questions (e.g., the percentage agreeing that LPT acts fairly with regard to career progression / promotion, regardless of ethnic background, gender, religion, sexual orientation, disability or age) "better than the benchmark" was indicated by a higher score and "worse than the benchmark" was indicated by a lower score; whilst for other questions (e.g., the percentage experiencing one or more incident of bullying and harassment from other colleagues in the past 12 months) "better than the benchmark" was indicated by a lower score and "worse than the benchmark" was indicated by a higher score.

# The degree to which the workforce of Leicestershire Partnership NHS Trust reflects the population that it serves

- Compared to the equality profile of the local working age population (Table 4):
  - o Age:
    - Amongst both substantive and bank staff:
      - younger people (aged 29 years and under) were underrepresented.
  - Ethnicity:
    - Amongst substantive staff:
      - overall, BME people were underrepresented (particularly "other" White, Mixed race, and Asian British people – with the greatest degree of underrepresentation amongst Asian British people);
      - whilst Black British people were overrepresented.
    - Amongst bank staff:
      - BME people were overrepresented (particularly Black British people and people from "other" ethnic groups other than "other" White, Mixed, and Asian British).
  - Gender:
    - Amongst both substantive and bank staff:
      - men were underrepresented.
  - Marital status:
    - Amongst substantive staff:
      - people who were Married or in a Civil Partnership were overrepresented, whilst single people and people who were Divorced, Legally Separated or Widowed were underrepresented.
    - Amongst bank staff:
      - people who were Married or in a Civil Partnership were overrepresented.
  - Religion or belief:
    - Amongst substantive staff:
      - Atheists and Muslims were underrepresented.
    - Amongst bank staff:
      - Atheists were underrepresented.

- The underrepresentation of younger people at LPT might reflect that many posts in the Trust required a clinical qualification. For example, 34.9% of the substantive workforce (Table 2) and 19.6% of those employed solely on the bank (Table 3) were registered nurses; the nursing staff group had relatively low proportions of people aged 29 years old and under, both in terms of the substantive workforce (Table 20) and amongst bank staff (Table 21).
- The underrepresentation of Asian British people amongst staff at LPT was most marked in the
  qualified Nursing profession (Table 20, Table 21). Registered nurses represented the largest staff
  group at Leicestershire Partnership NHS Trust. This suggests a specific need to promote the
  Nursing profession to Asian British people in order to develop a workforce with an ethnic profile that
  is more representative of the local population.
- Similarly, the underrepresentation of men amongst staff at LPT was especially marked amongst qualified Nursing staff (Table 20, Table 21). This suggests a need to promote the Nursing profession to men in order to develop a workforce with a gender profile that is more representative of the local population.
- The underrepresentation of Atheists amongst staff at LPT might reflect that religion or belief was not known for 22.6% of substantive staff and 25.0% of bank staff (Table 48) and that Atheists could have formed a disproportionately large percentage of those who did not declare their religion or belief. This inference is made on the basis of comparisons between the religion or belief profile of staff on the Electronic Staff Record and that of LPT's respondents to the 2016 NHS Staff Survey. Of the Substantive Staff who gave their religion or belief on the Electronic Staff Record, 13.7% identified as Atheist, but religion or belief was not known for 22.6% of staff. Meanwhile, in Leicestershire Partnership NHS Trust's 2016 NHS Staff Survey, 32.8% of staff who gave their religion or belief identified as Atheist, with just 9.5% of staff withholding their religion or belief. Thus, data held in the Electronic Staff Record may underestimate the percentage of Atheist staff.
- The ethnicity profiles of the substantive workforce and bank workforce differed relative to the local
  population, with BME staff underrepresented amongst substantive staff, but overrepresented
  amongst bank staff. This finding is examined in more detail in the section which analyses
  Leicestershire Partnership NHS Trust's workforce equality profile by directorate.

#### Data quality notes:

- Disability status was not known for 25.6% of the substantive workforce and 29.8% of bank\*\* staff
- Ethnicity was not known for 2.3% of the substantive workforce and 5.9% of bank\*\* staff
- Marital Status was not known for 3.3% of the substantive workforce and 5.6% of bank\*\* staff
- Religion or Belief was not known for 5.8% of the local population, 22.6% of the substantive workforce and 25.0% of bank\*\* staff
- Sexual Orientation was not known for 4.5% of those involved in the local population estimate, 22.5% of the substantive workforce and 26.7% of bank\*\* staff

WRES: Workforce Race Equality Standard

<sup>\*</sup> Leicester, Leicestershire, and Rutland working age population (16 to 64 years old); estimates are based on the UK Census 2011, except for age and gender which are based on ONS mid-year population estimates to June 2015 and sexual orientation which is based on an estimate for the East Midlands from the 2015 ONS Annual Population Survey

<sup>\*\*</sup> those employed solely on the bank, without a substantive post at LPT

<sup>†</sup> includes Civil Partnership

<sup>‡</sup> includes Legally Separated and Widowed

#### Leicestershire Partnership NHS Trust's workforce equality profile, by directorate

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's substantive workforce at March 2017 (Table 5):
  - o In Adult Mental Health and Learning Disabilities there were overrepresentations of Black British employees, men, single people, Atheists, and those of "other" religions (other than Christianity, Hinduism, Islam, and Sikhism); whilst Asian British employees, women, and married people were underrepresented.
  - o In Community Health Services there was overrepresentation of White employees, women, and Christians; whilst there was underrepresentation of BME employees (particularly Asian British employees), men, and Hindus.
  - In Enabling there were overrepresentations of younger employees (29 years and under), BME employees (particularly Asian British employees), men, Hindus, Muslims, and Sikhs; whilst there were underrepresentation of White employees, Black British employees, women, and Christians.
  - o In Families, Young People, and Children's services there was an overrepresentation of women and an underrepresentation of men.
  - o In Hosted services there were overrepresentations of BME employees (particularly Asian British employees), men, Muslims, and Sikhs; whilst there was an underrepresentation of women.
  - Amongst Bank staff there were overrepresentations of younger employees (29 years and under), BME employees (particularly Asian British, Black British, and employees of "other" ethnicities – other than Mixed race), men, single people, and Muslims; whilst there were underrepresentation of employees aged 30 to 49 years old, White employees, women, married people, Atheists and those of "other" religions (other than Christianity, Hinduism, Islam, and Sikhism).
- These patterns primarily reflect the distribution of different staff groups across directorates (Table 6) and occupational segregation by protected characteristic within the workforce (Table 20, Table 21). Occupational segregation is analysed in more detail, in the section that analyses Leicestershire Partnership NHS Trust's workforce equality profile by staff group.

- However, the differing ethnicity profiles of bank and substantive staff could not be explained entirely by occupational segregation. Further
  compartmentalised analyses compared the ethnicity profile of the bank workforce to that of the substantive workforce within certain pay bands and
  staff groups:
  - At clinical bands 2 and 5, Black British employees were overrepresented amongst those solely on a bank contract and without a substantive post at LPT (Table 7).
  - Amongst Additional Clinical Services staff and qualified Nurses, Black British employees were overrepresented amongst those solely on a bank contract and without a substantive post at LPT (Table 8).
  - Amongst Administrative and Clerical staff, Asian British and Black British employees were overrepresented amongst those solely on a bank contract and without a substantive post at LPT (Table 8).

### Leicestershire Partnership NHS Trust's workforce equality profile, by pay band

The equality profiles of employees across pay bands have been analysed using the methodology described in the latest release of the technical guidance for the Workforce Race Equality Standard (NHS England, 22<sup>nd</sup> March 2017). The analysis looked at individual pay bands and divided the workforce in to non-clinical staff, in order to identify patterns in progression across different groups of staff. The analysis looked at the percentage contribution of people from a given equality breakdown group to a given pay band and compared it with the contribution of people from that equality breakdown group to the overall workforce. This was done separately for substantive staff and for those staff employed solely on the bank.

#### Substantive staff

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's substantive workforce at March 2017 (Table 9):
  - o Age:
    - In non-clinical posts, younger employees (29 years old and under) were overrepresented amongst Apprentices and at Band 1 and under, and, in general, were concentrated at Band 4 and under; this probably reflected the career stage of these younger employees.
    - In clinical posts, younger people (29 years old and under) were overrepresented amongst Apprentices, at Band 5 (the lowest pay band for a qualified nurse), and on Medical Training Grades; again, this probably reflected the career stage of these younger employees.
  - o Ethnicity:
    - In non-clinical posts, BME employees (especially Asian British employees) were overrepresented at Bands 2 and 3. Although BME employees (especially Asian British employees) had a younger age profile than White employees (Table 10), this pattern was still evident to varying degrees when the analyses were compartmentalised by age band (29 years old and under, Table 12; 30 to 49 years old, Table 13; 50 years old and over, Table 14) especially amongst staff aged 30 to 49 years old (Table 13).
    - In clinical posts, BME employees were overrepresented at Band 2 and in Medical posts, and were underrepresented at Band 3 and at Bands 6 to 7. However, the equality profile of BME staff across pay bands in clinical posts had two principal components, one related to the distribution of Asian British employees and the other related to the distribution of Black British employees:
      - Asian British employees were overrepresented in Medical roles, with an overall underrepresentation in clinical roles outside of Medicine – especially in qualified Nursing roles (Table 20).

- Black British employees in clinical posts were concentrated at Band 2 (the lowest pay band for unqualified clinical roles in the Additional Clinical Services staff group) and Band 5 (the lowest pay band for qualified Nurses), with much lower levels of representation at higher unqualified (Bands 3 and 4) and qualified (Bands 6 and over) pay bands. In analyses compartmentalised by age band (29 years old and under, Table 12; 30 to 49 years old, Table 13; 50 years old and over, Table 14), this pattern was most evident amongst those aged 30 to 49 years old (Table 13). Black British employees were also overrepresented at Clinical Band 2 amongst staff aged 50 years old and over (Table 14).
- The findings related to the overrepresentation of BME employees at lower non-clinical pay bands and the concentration of Black British employees at lower unqualified and qualified clinical pay bands can be cross referenced with findings from the 2016 NHS Staff Survey. Leicestershire Partnership NHS Trust's 2016 Staff Survey indicated that BME employees in general, and Asian British, Black British and Mixed race employees in particular, were less likely than other employees to feel that the Trust acts fairly with regard to career progression / promotion, regardless of ethnic background, gender, religion, sexual orientation, disability or age (Table 36); BME employees, and Black British employees in particular, were also more likely to report discrimination from managers or other colleagues (Table 46).

#### Gender:

- In non-clinical posts, men were overrepresented amongst Apprentices (although the overall number of Apprentices was low) and at Bands5to 7, with an overall trend for higher percentages of men at higher pay bands (especially at Band 5 and above)—potentially reflecting an equality issue in terms of the progression of female employees to higher pay bands in non-clinical posts.
- In clinical posts men were overrepresented in Medical roles (especially at consultant level) and underrepresented at Bands 5 to 6.
- Although, the age profiles of female and male employees were similar (Table 11), analyses compartmentalised by age band were undertaken to control for potential effects of age and career stage on the findings of the pay band analyses (29 years old and under, Table 12; 30 to 49 years old, Table 13; 50 years old and over, Table 14):
  - When the pay band analyses were compartmentalised by age group, the pattern for greater percentages of men at higher nonclinical pay bands, and for greater percentages of men amongst consultants, was evident amongst 30 to 49 year olds (Table 13) and amongst those aged 50 years old and over (Table 14).
- The Government has introduced mandatory gender pay gap reporting for private, voluntary and public sector organisations from the 2016/17 financial year. Leicestershire Partnership NHS Trust will be required to publish a gender pay gap analysis before the end of the 2016/17 financial year. The analyses of gender and pay band detailed above indicate that Leicestershire Partnership NHS Trust's gender pay gap analyses will reveal a pay gap in favour of men. Gender pay gap reporting will be the subject of a separate report to follow.

#### Bank staff

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's bank workforce at March 2017 (Table 15):
  - o Age:
    - In non-clinical posts, younger employees (29 years old and under) were overrepresented at Band 2.
    - In clinical posts, younger employees (29 years old and under) were underrepresented at Band 5, people aged 30 to 49 years old were overrepresented at Band 2, and older people (50 years old and over) were underrepresented at Band 2 and overrepresented at Band 6.
  - Ethnicity:
    - In non-clinical posts, Asian British employees were overrepresented at Bands 2 and 4, whilst Black British employees were underrepresented at Bands 2 and 4, and those from "other" ethnic groups (other than Mixed) were overrepresented at Band 4.
    - In clinical posts, White Employees were overrepresented at Bands 5 and 6, and underrepresented at Band 2. Asian British employees were underrepresented at Band 5. Black British employees were overrepresented at Band 2 and underrepresented at Band 6.
    - BME employees on the bank, particularly Asian British employees, had a younger age profile than White employees on the bank (Table 16). Analyses compartmentalised by age band were undertaken to control for potential effects of age and career stage on the findings of the pay band analyses (29 years old and under, Table 17; 30 to 49 years old, Table 18; 50 years old and over, Table 19):
      - In non-clinical posts, Asian British employees were overrepresented at Non-clinical Band 2 amongst bank employees aged 29 years old and under (Table 17), but were overrepresented at Band 4 amongst those aged 30 to 49 years old (Table 18) and 50 years old and over (Table 19).
      - In clinical posts Black British employees were overrepresented at Band 2 amongst those aged 30 to 49 years old (Table 18) and 50 years old and over (Table 18); whilst White employees were overrepresented at Bands 5 and 6 amongst those aged 30 to 49 years old (Table 18).

## Leicestershire Partnership NHS Trust's workforce equality profile, by staff group

#### Substantive staff

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's substantive workforce at March 2017 (Table 20):
  - o In the Additional Clinical Services group there was an overrepresentation of employees who were divorced, legally separated or widowed.
  - In the Additional, Professional, Scientific, and Technical group there was an overrepresentation of Atheists and an underrepresentation of Christians.
  - o In the Administrative and Clerical group there were overrepresentations of BME employees, men, Hindus, Muslims, and Sikhs; whilst there was an underrepresentation of Christians.
  - In the Allied Health Professionals group there was an overrepresentation of Atheists and underrepresentation of BME employees, men, and employees who were divorced, legally separated or widowed.
  - In the Medical and Dental group there overrepresentations of BME employees, men, Hindus, and Muslims (related to a low level of representation for Asian British people); whilst there were underrepresentation of White employees, women, employees who were divorced, legally separated or widowed, and Christians.
  - In the Nursing and Midwifery group there was an overrepresentation of Christians; whilst there were underrepresentation of BME employees, men. Hindus. Muslims. and Sikhs.
- Thus, the equality profile of Leicestershire Partnership NHS Trust's workforce across staff groups suggests the presence of occupational segregation. This may in turn reflect traditional cultural and gender-based career preferences, historical economic migration, as well as the differing age profiles of different ethnic groups (Table 10) and the requirement for certain levels of experience or qualification for some types of role.
- Noting the equality profile of Leicestershire Partnership NHS Trust's workforce across staff groups might help with designing long-term strategies to recruit to, or develop staff for, types of posts for which there are recruitment shortages. For instance, there are national shortages of qualified nurses; nursing careers could be promoted to those from Hindu, Muslim, and Sikh backgrounds, and to men, in order to take advantage of an untapped source of potential nursing talent.

#### Bank staff

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's bank workforce at March 2017 (Table 21):
  - o In the Additional clinical Services group there was an overrepresentation of Black British employees and an underrepresentation of White employees.
  - o In the Administrative and Clerical group there was an overrepresentation of Asian British employees, Hindus, and Muslims; whilst there were underrepresentation of Black British employees and Christians.
  - o In the Allied Health Professionals group there was an overrepresentation of Atheists and underrepresentation of BME employees, men, and employees who were divorced, legally separated or widowed.
  - In the Medical and Dental group there was an overrepresentation of Muslims.
  - o In the Nursing and Midwifery group there was an overrepresentation of White employees; whilst there were underrepresentation of Asian British and single employees.

## Leicestershire Partnership NHS Trust's workforce equality profile, by working pattern and opportunities for flexible working

- Compared to the overall equality profile of Leicestershire Partnership NHS Trust's substantive workforce at March 2017:
  - There were no significant variations in the profile of those requesting flexible working by protected characteristic (Table 22), service area (Table 23), staff group (Table 23), or pay band (Table 24). All but one request for flexible working was granted in some form.
  - The 2016 NHS Staff Survey indicates that employees of "other" religions or beliefs (not Atheism, Buddhism, Christianity, Hinduism, Islam or Sikhism) where less likely to be satisfied with the opportunities for flexible working (Table 25), but overall numbers were small. With respect to work areas, employees in CHS and those in Additional Clinical Services roles were less likely to be satisfied with the opportunities for flexible working.
- Compared to the overall percentage of part-time workers in Leicestershire Partnership NHS Trust's substantive workforce at March 2017:
  - Younger employees (29 years and under), BME employees (particularly Asian British employees), men, single people, divorced, legally separated or widowed people, and LGB people were less likely to work part-time (Table 22).
  - Those in AMH&LD, Enabling, and Hosted Services were less likely to work part-time, whilst those in FYPC were more likely to work part-time (Table 23).
  - Administrative and Clerical staff were less likely to work part-time, whilst Allied Health Professionals were more likely to work part-time (Table 23).
  - Those at Non Clinical Bands 5 and 7 were less likely to work part-time, whilst those at Non Clinical Band 2 and Clinical Band 6 were more likely to work part-time (Table 24).
  - Variations in part-time working by age, gender, and marital status might reflect the career stage and caring responsibilities of different groups of employees. Variations in part-time working by ethnicity might reflect occupational segregation in the workforce occupational groups with higher representations of BME employees (especially Asian British employees, i.e., in the Administrative and Clerical and Medical and Dental staff groups, Table 20) were also less likely to have part-time workers (Table 23).
- The 2016 NHS Staff Survey indicates that Disabled employees in Administrative and Clerical roles were more likely than other staff groups to report having had reasonable adjustments made to enable them to do their work (Table 26).

### The equality profile of Leicestershire Partnership NHS Trust's recruitment process

- The overall equality profile of Leicestershire Partnership NHS Trust's recruitment process (Table 27):
  - Applicants:
    - Younger people (29 years old and under and 30 to 49 years old), Disabled people, BME people (especially Mixed Race, Asian British, and Black British), women, single people, people of minority faiths (Hindus, Muslims, Sikhs, and "other" religious groups), and LGB people were overrepresented amongst applicants to posts at Leicestershire Partnership NHS Trust compared to expectations based on the profile of the local working age population.
  - Short listing:
    - Younger people (29 years old and under), BME people (particularly Mixed Race and Asian British), men, single people, and people of minority faiths (Hindus, Muslims, and Sikhs) were less likely to be shortlisted.
  - Appointment:
    - BME people (particularly Asian British) were less likely to be appointed.
- An in depth analysis of recruitment was undertaken by staff group, pay band, and protected characteristic. Those findings that further inform regarding the lower likelihood of appointment for BME people are reviewed here:
  - BME people were less likely to be appointed from amongst those shortlisted in Administrative and Clerical roles, especially at Band 2 and Band 6; Asian British people appeared to be at a particular disadvantage, overall and at Band 2 (Table 28).
  - BME people were less likely to be appointed from amongst those shortlisted in Nursing roles, especially at Band 5 and Band 6; Black British
    people appeared to be at a particular disadvantage at Band 6 (Table 29).
- Further analysis by service area indicated that BME people were less likely to be appointed from amongst those shortlisted in AMH, CHS, Enabling, and FYPC; when looking at ethnicity in further detail, Black British people appeared to be at a particular disadvantage in AMH, whilst Asian British people appeared to be at a particular disadvantage in CHS and in Bank roles (Table 30).

- The overall lower likelihood of appointing BME people, and particularly Asian British people, might be explained in part by the distribution of these groups within the workforce. It is noted that within LPT's workforce, younger people and BME people were overrepresented at lower pay bands (Table 9) and that Asian British employees (who make up the bulk of BME employees at LPT, Table 4) have a younger profile than the workforce overall(Table 10). It could be inferred that the cohort of BME people applying for posts with the Trust might be younger and might tend to apply for lower level, unqualified posts. Meanwhile, the majority of higher level, qualified posts are in Nursing; BME people (especially Asian British people) were underrepresented in these roles (Table 20). As the lower level, unqualified posts attract greater numbers of applicants with higher levels of competition per post, this will necessarily result in lower proportions of applicants for these posts making it to the shortlisting and appointment stages—with a disproportionately large effect on BME people.
- However, when the recruitment analyses were compartmentalised by job role and pay band, it was found that BME people (especially Asian British
  people) were less likely to be appointed in Band 2 Administrative and Clerical post (Table 28). Similarly, in Nursing, although overall Black British
  people were nearly as likely as other ethnic groups to be appointed, the likelihood of a Black British person being appointed to a higher level nursing
  post (Band 6) was markedly lower (Table 29); the likelihood of a Black British person being appointed was also low in Adult Mental Health services
  (Table 30).
- To address this issue, it may be necessary to encourage more applications from qualified and experienced BME people to higher level, qualified posts (for instance, by encouraging Asian British people into Nursing).
- Men were underrepresented amongst applicants to posts at Leicestershire Partnership NHS Trust compared to expectations based on the profile of the local working age population (Table 27); this may reflect a female gender bias in the Nursing profession, although men were underrepresented in most roles across the Trust when compared to the local working age population (except at the highest pay bands and in medical posts). Men were also underrepresented amongst those shortlisted compared to those not shortlisted.

# Leicestershire Partnership NHS Trust's substantive workforce equality profile, by promotions, the award of annual pay increments, and the uptake of non-mandatory training

- Promotions (defined as an increase in pay band compared to March 2016):
  - Older employees (50 years old and over) and married employees were less likely to be promoted (Table 31); reflecting differences in career stage by age older people tended to be at higher pay bands already (Table 9). Promotions to Band 4 and Band 7 were most common (Table 32), and full-time staff were more likely than part-time staff to be promoted (Table 33); perhaps reflecting that part-time staff tended to be older than full-time staff (Table 22).
- Award of the annual pay increment:
  - Younger employees (29 years old and under), BME employees (especially Black British staff), men, single people, and (amongst women under 50 years old) those not on maternity leave were less likely to be awarded their annual pay increment (Table 31). These ethnicity, age, and gender profiles tally with the portions of the workforce least likely to be awarded an increment: Clinical staff at Bands 2 and 5 (Table 32), those working in AMH&LD, and Additional Clinical Services staff (Table 33). It is noted that compartmentalised analyses within Clinical Bands 2 and 5 (Table 34) indicate that BME staff (overall or when considered in more detailed ethnic groups) are not less likely to receive an increment (to a statistically significant degree). Thus, the overall lower likelihood of Black British staff receiving an increment appears to reflect the overrepresentation of Black British staff at Clinical Bands 2 and 5. Nonetheless, this issue affects Black British staff to a greater degree than other ethnic groups and may contribute to the 2016 Staff Survey finding that Black British staff (and BME staff in general) are less likely to feel that the organisation acts fairly with regard to career progression / promotion, regardless of ethnic background, gender, religion, sexual orientation, disability or age (Table 36); this particular indicator is part of the Workforce Race Equality Standard and as such it receives direct scrutiny from NHS England.

### Non-mandatory training:

- Older employees (50 years old and over), BME employees (especially Asian British), men, (amongst women under 50 years old) those on maternity leave, Hindus and Muslims were less likely to access non-mandatory training (Table 31). Those at Non-Clinical Pay Bands 2, 3, and 4, and at Clinical Pay Band 2 were less likely to access non-mandatory training (Table 32), as were those in Enabling services, Hosted Services, part-time staff, and in the Additional Clinical Services, Additional Professional Scientific and Technical, Administrative and Clerical, and Medical and Dental staff groups (Table 33).
- A lower uptake of non-mandatory training amongst BME employees might reflect occupational segregation within the workforce. Those in the Nursing and Midwifery group were overrepresented amongst those undertaking non-mandatory training (Table 33); whilst BME people (especially Asian British people) were underrepresented in this occupational group (Table 20). Simultaneously, those in the Additional Professional Scientific and Technical, Administrative and Clerical, and Medical and Dental occupational groups were underrepresented amongst those undertaking non-mandatory training (Table 32); Asian British people were overrepresented in these occupational groups (Table 20).
- o It is noted that compartmentalised analyses within Non Clinical Pay Bands Apprentice to Band 4 (pooled) and at Clinical Band 2(Table 35) indicate that BME staff (overall or when considered in more detailed ethnic groups) are not less likely to access non-mandatory training (to a statistically significant degree). Thus, the overall lower likelihood of Asian British staff accessing non-mandatory training appears to reflect the overrepresentation of Asian British staff at these pay bands. Nonetheless, this issue affects Asian British staff to a greater degree than other ethnic groups and may contribute to the 2016 Staff Survey finding that Asian British staff (and BME staff in general) are less likely to feel that the organisation acts fairly with regard to career progression / promotion, regardless of ethnic background, gender, religion, sexual orientation, disability or age (Table 36); this particular indicator is part of the Workforce Race Equality Standard and as such it receives direct scrutiny from NHS England.

### The equality profile of workforce leavers and their reasons for leaving (excluding dismissals)

- The equality profile of turnover in Leicestershire Partnership NHS Trust's substantive workforce during 2016/17 was calculated relative to the substantive workforce at March 2017:
  - o Turnover was higher amongst younger people (29 years old and under), older people (50 years old and over), people from "other" ethnic groups (other than White, Mixed, Asian British, and Black British), single people, and Muslims (Table 38).
  - o Turnover was higher amongst Non-Clinical Apprentices and amongst Medical and Dental Trainees (Table 39).
  - Turnover was higher in Enabling and in the Medical and Dental staff group (Table 40).
  - Those aged 29 years old and under, BME people (especially Asian British), men, single people, Hindus and Muslims were overrepresented amongst those leaving due to the end of a fixed term contract (Table 41).
  - Non-clinical Apprentices and Medical Trainees were overrepresented amongst those leaving due to the end of a fixed term contract (Table 42).
  - o Medical Trainees (Enabling division) were overrepresented amongst those leaving due to the end of a fixed term contract (Table 43).
  - Older people (50 years old and over), White people, Married people, Divorced people, and Christians overrepresented amongst those who
    retired (Table 41).
  - Nursing was overrepresented amongst those who retired (Table 43).
  - Those aged 30 to 49 years old (Table 41) and staff in CHS were overrepresented amongst voluntary resignations (Table 43).

## The equality profile of employee relations cases at Leicestershire Partnership NHS Trust

The analysis of employee relations cases considered new cases opened within a two year window covering the 2015/16 and 2016/17 financial years. This method increases the numbers available for analysis and brings the methodology in line with the disciplinary indicator of the Workforce Race Equality Standard.

- Bullying and harassment:
  - Each protected characteristic subgroup was proportionately represented amongst those who raised formal complaints of bullying and harassment (Table 44).
  - However, cross referencing with the 2016 NHS Staff Survey indicates a different pattern of bullying and harassment amongst LPT's employees:
    - men and LGBO employees were more likely to report physical violence at work from a manager (Table 46), although numbers were small; whilst men (Table 46), employees in AMH&LD and those in Additional Clinical Services roles were more likely to report physical violence at work from other colleagues (Table 47);
    - Disabled staff were more likely to report bullying or abuse at work from a manager and from other staff (Table 46), and staff in Hosted Services were more likely to report bullying or abuse at work from a manager (Table 47);
    - Disabled staff and BME staff (especially Black British staff) were more likely to report discrimination at work from a manager, team leader or other colleagues (Table 46).
  - Thus, there is a difference between the pattern of bullying and harassment recorded within Leicestershire Partnership NHS Trust's record of employee relations cases and that reported in the 2016 NHS Staff Survey; this may reflect underreporting of bullying and harassment using the official, internal route amongst some groups, or differing criteria for bullying and harassment applied in the 2016 NHS Staff Survey and in the official process. There may be a need to further promote the official route for dealing with bullying and harassment amongst employees, including further promotion of the Anti-Bullying and Harassment Advice Service helpline, whilst ensuring that official definitions of bullying and harassment are not so restrictive that they prevent staff with genuine problems from accessing help.

- Capability proceedings:
  - o BME employees (particularly Black British employees) and men were more likely to be subjected to capability proceedings (Table 44).
- Disciplinary proceedings:
  - Each protected characteristic subgroup was proportionately represented amongst those subjected to disciplinary proceedings (Table 44).
     There were disproportionately high levels of disciplinary proceedings amongst staff at Clinical Band 2 (Table 45).
- Grievances (only grievances brought by individual employees have been considered there were a further two "Trust-wide" grievances):
  - o Asian British people were overrepresented amongst those who raised a grievance (Table 44).
- Dismissals capability (16/17 financial year only):
  - Each protected characteristic subgroup was proportionately represented amongst those dismissed on the grounds of capability (Table 44).
     AMH&LD had a disproportionately high number of employees dismissed on the grounds of capability.
- Dismissals conduct or some other substantial reason (16/17 financial year only):
  - o Men were overrepresented amongst those dismissed for reasons of conduct or some other substantial or statutory reason (Table 44).

Table 44: Representation in Leicestershire Partnership NHS Trust's overall workforce at March 2017compared to representation amongst different employee relations case types during 2015/16 and 2016/17, by protected characteristic (dismissals consider only 2016/17)

# Appendix of data quality analysis tables

#### General notes on missing data

- There were high levels of missing data for the protected characteristics of disability, religion of belief, and sexual orientation (Table 48); this was true across the whole of the Substantive and Bank workforce of the Trust, but levels of missing data were especially high for these three protected characteristics in the Adult Mental Health and Learning Disabilities Directorate and also amongst Bank staff. Meanwhile the Hosted Services directorate had a relatively high level of missing data for ethnicity.
- Within the Substantive workforce, missing data reflected primarily that about a quarter of the workforce chose not to declare information about disability, religion of belief, and sexual orientation ("prefer not to say").
- Amongst Bank staff, information about the protected characteristics of disability, religion of belief, and sexual orientation was not held for between a quarter and a third of the workforce, reflecting that high proportions of staff chose not to disclose this information ("prefer not to say"), but also reflecting high proportions of blank records (where no selection had been made).
- There is doubt regarding the reliability of findings derived from incomplete equality monitoring data. For each protected characteristic that had high levels of missing data, potential bias introduced by the missing data is assessed by comparing the equality profile of substantive staff on ESR with the equality profile of LPT staff who responded to the 2016 NHS Staff Survey. The 2016 NHS Staff Survey was distributed anonymously to substantive staff and typically contains equality monitoring data that is more complete than that held on ESR.

### Missing data on disability

• Of the Substantive Staff who gave their disability status, 5.3% identified as disabled, but disability status was not known for 25.6% of staff. Meanwhile, in LPT's 2016 NHS Staff Survey, 23.5% of staff who gave their disability status identified as disabled, with just 1.9% of respondents withholding the information. Thus, data held in the Electronic Staff Record may underestimate the percentage of disabled staff.

#### Missing data on religion or belief

• Of the Substantive Staff who gave their religion or belief on the Electronic Staff Record, 13.7% identified as Atheist, but religion or belief was not known for 22.6% of staff. Meanwhile, in Leicestershire Partnership NHS Trust's 2016 NHS Staff Survey, 32.8% of staff who gave their religion or belief identified as Atheist, with just 9.5% of staff withholding their religion or belief. Thus, data held in the Electronic Staff Record may underestimate the percentage of Atheist staff.

#### Missing data on sexual orientation

• Of the Substantive Staff who gave their sexual orientation on the Electronic Staff Record, 2.5% identified as LGBO, but sexual orientation was not known for 22.5% of staff. In LPT's 2016 Staff Survey, 2.8% of staff who gave their sexual orientation identified as not heterosexual, with 10.1% of respondents withholding the information. Thus, data held in the Electronic Staff Record may give a reliable picture of sexual orientation in the workforce, despite being incomplete.
